

## Rigs needed to drill all shale proved reserves

How do Shale well drilling rigs work?

For shale well drilling specialized drilling rigs are required to handle long and heavy drill strings in order to drill thousands of feet into the ground vertically and then thousands more feet horizontally.

What drilling rigs are used in shale development?

The drilling rigs used in shale development are usually "top-drive" rigs that are capable of "walking" short distances (on the order of 20 feet) in order to drill multiple wells on one well pad without the need to dis-assemble and re-assemble the rig between each well.

Do you need a drilling rig in Pennsylvania?

Most producing companies do not own or maintain their own drilling rigs and must lease rigs from a drilling or service company. For shale gas drilling in Pennsylvania, heavy duty rigs are required to handle long (heavy) drillstrings for deep drilling.

How much does it cost to drill shale gas in Pennsylvania?

For shale gas drilling in Pennsylvania, heavy duty rigs are required to handle long (heavy) drillstrings for deep drilling. These cost upwards of \$250,000/day to lease and are usually top-drive rigs (Fig 5.5.1) that are capable of "walking" short distances in order to drill multiple holes on one pad (see 5.5.5).

What are oil shale reserves?

Oil shale reserves refers to oil shale resources that are economically recoverable under current economic conditions and technological abilities. Oil shale deposits range from small presently economically unrecoverable to large potentially recoverable resources.

Why are drilling contractors expanding their rig fleets?

Drilling contractors are expanding their fleets to accommodate growing demand for high-horsepower land rigs equipped with powerful mud pumps, heavy-duty drawworks, closed-loop mud systems, automated rig floor equipment and 'smart' data management systems.

As recently as the late 1990s, only 40 drilling rigs (6% of total active rigs in the U.S.) in the U.S. were capable of onshore horizontal drilling; that number grew to 519 rigs (28% of total active ...

However, horizontally drilled wells are more expensive to drill and complete at the same depth because they are longer and the drilling process is more complex.<sup>11</sup> Proved reserves of U.S. ...
