What is a rotary rig?

A conventional rotary rig or rotary table rig or kelly drive rig is a drilling rig where the rotation of the drill string and bit is applied from a rotary table on the rig floor.

What is the difference between impact and rotary drilling rigs?

Rotary drilling rigs drill about 8-10m per day according to normal construction quality requirements and general geological formation conditions. Impact (percussion) drilling rigs, on the other hand, have strong adaptability but are slower than rotary rigs. Rotary rigs cannot cope with harder formations other than strongly weathered formations.
