How does a 3D drilling rig work?

Three-dimensional modeling of the rig floor enables ideal positioning of the driller's control chair, enhancing safety and operational efficiency. The cabin provides integrated joystick control, utilizing PLC technology. Additionally, touch-screen controls provide enhanced monitoring, control of rig equipment and visibility of drilling parameters.

Should I use VFD or SCR driven equipment?

We highly recommend the use of VFD driven equipment over the SCR driven equipment due to much less maintenance. The VFD (AC) has great advantages in regard to your operations, where you can operate your mud pumps and top drive at low-to-none RPM under full torque and pressure.
