Do you know if your compressed air system is leaking?

Detecting and repairing leaks in your compressed air system is not only close to maintenance level but is, in the end, the basis of operational efficiency and cost control. Air leaks often go unnoticed. A gentle hiss doesn't seem like much, but it can rack up quickly.

Why is my air compressor leaking a lot?

Every leak is a sign of some form of wear or fault in the compressed air system. Continual leaks in higher pressure equipment indicate a system that's under stress, leading to a reduced lifespan for the equipment. Increasing air compressor efficiency can save hundreds of thousands of dollars a year.

Why is detecting compressed air leaks important?

Leaks account to up to 20% of business costs, reduce productivity and tie up resources like maintenance teams. That makes detecting compressed air leaks and repairing them promptly crucial for profit, productivity, and even safety. In this article, we'll cover:
