What type of oil is used in a rotary screw compressor?

Mineral oils (petroleum oils) have long been used in various types of compressors. Their use in rotary screw compressors was common until the 1980's. Some manufacturers' factory filled with motor oil and some used automatic transmission fluid. Mineral oils began to lose favor when oil recyclers began to charge for oil disposal.

How long do rotary screw compressor lubricants last?

Varnish and other unwanted substances quickly follow. With regular mineral oils, this process can begin after only one to two thousand hours in a rotary screw compressor. Synthetic lubricants are more stable than natural mineral oils and oxidize more slowly. Most full synthetics have an 8000-hour service life rating or more.

Do rotary screw compressors need lubricant?

Lubricant is a critical component in rotary screw compressors. Its condition is the key element in determining the service life of the machine, and it is constantly exposed to contamination. In order to maximize the service life of the compressor, follow these rules: Locate the compressor inlet to draw clean, cool air.

Do flooded rotary screw air compressors need lubricating oil?

The principles and importance of clean, warm lubricating oil are the same for all flooded rotary screw-type air compressors, so though there may be a variance on the operational order in your air compressor, the principles and required components remain the same.

What is the most common contaminant in rotary screw compressors?

The most common and most damaging contaminant in rotary screw compressors and rotary screw vacuum pumps is water. The primary source of water contamination in rotary screw compressors is the inlet air. Ambient humidity and the compressors operating conditions affect water formation in the lubricant circuit.

How does an air compressor lubricant valve work?

When the air compressor is first started, and the oil is cold, this valve will direct our oil straight into the air end and bypass the oil cooler. This will ensure the lubricant heats up quickly and can effectively perform all the tasks we demand of it.
