

Screw air compressor oil filter replacement

How do you change oil on a screw air compressor?

In basic terms, the oil change process for a screw air compressor looks something like this: Clean the area near the compressor's tank and oil filter to avoid contamination. Remove the oil drain plug and empty the old oil into a sufficiently large container.

What is rotary screw air compressor oil?

Air compressor oil plays several vital roles within a rotary screw air compressor system: Rotary screw air compressors are sometimes "oil flooded" or "oil injected," describing that oil is injected into the rotor housing. The oil mixes with the air during compression but is separated back out before the compressed air leaves the system.

How do you change a compressor oil filter?

Properly clean the gasket sealing surface on the front of the tank. Apply a thin layer of compressor oil on the rubber gasket of the new oil filter. Place the filter onto the threaded nipple and spin until the gasket touches the sealing surface of the tank. Properly tighten the filter so that it is completely settled on the gasket.

How do you clean an air compressor oil filter?

Clean the area around the air compressor's WHASP tank and oil filter to prevent contamination. Remove the oil drain plug and drain the oil into a container with a capacity of at least 1 gallon (4L). Inspect the Viton O-ring on the oil drain plug for damage, hardness or defects and replace if necessary. Install and tighten the oil drain plug.

How to remove air/oil separator filter?

1. Open the access door on the curb side of the unit.
2. The air/oil separator filter is attached to the housing on the receiver tank. Remove the four bolts holding the filter housing.
3. The housing is easily removed granting access for the filter removal. Discard the used filter and unwrap the replacement filter.
- 4.

What is air compressor oil?

Air compressor oil is standard or synthetic oil made specifically for air compressors. Unlike motor oil, air compressor oil does not contain detergent and typically has lower amounts of carbon, sulfur, and other contaminants that can cause build-up.
