How much power does a screw air compressor have?

Nascent Machinery Company is manufacturing the screw air compressor models with power ranging from 10 hp to 500 hp (7.5 kw to 400 kw). These direct driven compressors have standard full load pressure rating from 110 psi, 125 psi, 150 psi and 175 psi, 220 psi (0.8Mpa, 1.0Mpa, 1.3Mpa, and 1.6Mpa). Thank you for choosing our Screw Compressor.

How oil injected screw air compressor works?

The oil-injected screw air compressor has the characteristics of reliable running performance, few wearing parts, low vibration, low noise, and high efficiency. During the compression process, the compressor continuously sprays lubricating oil into the compression chamber and bearings by virtue of its own pressure difference.

Why should you lubricate a screw compressor?

Environmental protection: Lubricating oil can reduce the noise caused by high-frequency compression. The oil-injected screw compressor used by our company is a double-shaft positive displacement rotary compressor. The air inlet opens at the upper end of the casing, and the exhaust outlet opens at the lower part.

How do you drain a screw compressor?

Screw compressor utilizes a pressurized fluid drain. Use the following procedure to drain and replace the compressor fluid. Press the emergency stop button and remove the right-side cabinet panel (if applicable). Check the pressure gauge reading on reservoir and wait until reservoir pressure drops to approximately 0.05Mpa (7psi).

How do you connect a compressor to a roof ventilator?

Connect an exhaust duct from the compressor to the roof ventilator. Local exhaust ventilation to control temperature requires much lower air flow rate. If air is exhausted from the room, make-up air must enter the room. Local exhausting requires much less air flow. Connect an exhaust duct from the compressor to the roof ventilator.

How do you check a screw compressor?

Check the set data, voltage, bearings, tubes, and other mechanical system. Screw compressor requires the minimum amount of inspection and maintenance. The controller and indicator alert the operator to perform required maintenance or repair unit problems. Screw compressors are filled & tested with Total lubricant.
