

Sedco 714 drilling rig

How does the Sedco 706 semisubmersible rig work?

In order to achieve this, the Sedco 706 semisubmersible rig relies heavily on its Dynamic Positioning (DP) system for automatic station keeping; it previously relied on anchors. As a result of the upgrade, Sedco 706 now features a DP class 2 system provided by Kongsberg Maritime.

Why did Transocean upgrade its Sedco 700 rigs?

FROM THE FULL PICTURE MAGAZINE -- To meet market demands for deepwater drilling, Transocean chose to upgrade two of its Sedco 700 series drilling rigs to dynamically positioned class 2 semi-submersible rigs. The process was so comprehensive the rigs were classified as newbuilds.

Does Sedco 706 have a DP class 2 system?

As a result of the upgrade, Sedco 706 now features a DP class 2 system provided by Kongsberg Maritime. The upgrade also consisted of systems for power management, thruster control, vessel control & auxiliary as well as fire and gas with emergency shutdown from Kongsberg Maritime.

Did Transocean upgrade the Sedco 706?

The retrofit of the Sedco 706 is the second in a double conversion contract. Transocean had already upgraded its Sedco 702, with mainly the same team from Kongsberg Maritime involved. The lessons learnt from this first conversion became the basis for the Sedco 706 project.

When did Transocean start jack-up drilling rigs?

The company launched its first jack-up drilling rig in 1954. Since then, Transocean has had a long history of 'firsts': among them, the latest generation of ultra-deepwater semi-submersible rigs and drillships, of which the upgraded Sedco 700 rigs make up an important part.

What is a DP class 2 semi-submersible rig?

The aim was to retrofit her into a dynamically positioned (DP) class 2 semi-submersible rig, capable of operating in moderate environmental conditions and in water depths down to 6500ft. In order to achieve this, major structural works were carried out, including a pontoon and column extension in order to contain more drilling fluids.
