What are the three parts of the core drilling process?

For people who are more visual and who prefer to watch a demonstration than to read about it, these videos are great. This latest video in our series reviews the three parts of the core drilling process: drilling, retrieving the core sample and resuming the drilling. Together they make a round trip and with each one, the bore hole gets deeper.

What does a drill video show?

It shows the movement of the drilling fluid, and the core as it is recovered. The video describes the purpose of each part and describes other types of equipment, such as core lifters and locking couplings, the difference between underground and surface overshots, and is chock full of interesting details.

How can animation transform the oil & gas industry?

Enter the transformative power of animation. In an age where visuals dominate, animation stands as a beacon, shedding light on the most complex of concepts. For the oil and gas industry, this means turning intricate drilling processes into easily digestible visual stories.
