What is a CDS drill pipe spinner?

PIPE SPINNERS CDS Drill Pipe Spinner The CDS Drill Pipe Spinner is a new generation drill pipe tool that provides a fast, safe, and efficient spin-up or spin-out, eliminating costly and dangerous accidents associated with the use of spinning chains. Our unique chain gripping system transmits more torque without slipping than any competitive

How does a drill rig work?

a drill bit studded with metal or diamond cutters to the bottom of the drill stem. Crewmembers then lower the drill stem into the hole until the bit is very near the bottom. At this point, the driller engages the rotary table assembly on the rig floor to turn the drill stem and bit. The mud pump is also started to circulate drilling fluid.

What equipment does a rotary rig use?

Spinning and torquing devices on a conventional rotary rig include large manual wrenches (fig. 69), power wrenches, chains, and other equipment that turn drill pipe. Crew members use this equipment to connect or disconnect the pipe. They frequently remove the drill stem from the hole and disassemble it.

Does a drill rig use a rotary swivel?

The rig uses a top drive in place of the regular swivel, the kelly, the kelly bushing, and the rotating function of the rotary table. Even on rigs with a top drive, however, the rig owner retains the rotary table and master bushing as a place for the floorhands to set the slips to suspend the drill stem in the hole.

How does rotary drilling work in Texas?

Before rotary drilling started to flourish in Texas in the 1900s, oil people drilled most wells with cable drilling tools. With this method, rig crewmembers attach a sharp tool--a bit--to a cable. The cable, along with other rig equipment, repeatedly picks up and drops the heavily weighted bit, which punches a hole into the ground.
