

## Ss dp2 drilling rig

How deep can a semi-submersible drilling rig operate?

Semi-submersible drilling rig with dynamic positioning capable of operating in water depths of up to 2,400 meters and drilling wells of up to 7,500 meters. The Norbe VI was built in 2010.

What is a dynamic positioning drilling vessel?

Dynamic positioning drilling vessel capable of operating in water depths of up to 3,000 meters and drilling wells of up to 12,195 meters. The ODN II is a 6th-generation drilling ship with a DP3 Kongsberg dynamic positioning system.

How many drillships & semisubmersible platforms are there?

Our drilling fleet consists of four drillships and one semisubmersible platform. One of the main highlights in our operations is the use of MPD (Managed Pressure Drilling), a tool present in the company's units, which adds even more safety to offshore activities, increasing operational reliability and reducing costs and environmental risks.

What is a rig type 5th Gen ss/2010 (GPC)?

It is a 6th-generation semi-submersible drilling platform, capable of operating in water depths of up to 2,400 meters and with a well drilling capacity of up to 7,500 meters. The Norbe VI accommodates 164 people and features a 56.40-meter-tall tower with a setback capacity of 6,900 meters. RIG TYPE 5th Gen SS/2010 (GPC)

What is a DP2 system?

Key Features: DP2 systems offer increased reliability by providing redundancy for all critical active components such as generators, thrusters, and control systems. In this system, a single fault in any active system will not cause a loss of position.

What is the difference between DP1 and DP2?

DP1 is typically used for vessels where the risk of losing position doesn't lead to severe consequences, such as supply vessels in calm environments. Key Features: DP2 systems offer increased reliability by providing redundancy for all critical active components such as generators, thrusters, and control systems.
