

Do twin-screw oil-flooded screw compressors improve performance?

So, in general, there is an improvement in all performance parameters of twin-screw oil-flooded screw compressors with the increase in the oil flow rate. But the optimum value needs to be identified because, after a certain point, the increased drag losses diminish the gain in performance with an increase in oil flow rate.

What is a twin-screw compressor?

Twin-screw compressors have been widely used in compression processes due to their advantages such as compact structure, stable operation and high efficiency. They are used in a number of industries such as oil and gas, refrigeration, processing or mining. In many cases, twin-screw compressors have replaced reciprocating compressors.

Do oil-injected twin-screw compressors have a multiphase flow model?

Overall, this study provides an insight into multiphase flow-modelling techniques available for oil-injected twin-screw compressors comprehensively accounting for the details of oil distribution in the compression chamber and integral compressor performance.

Does oil injection affect the working process of a twin-screw compressor?

Stosic et al. (2003) developed a numerical model to check the effect of oil injection on the working process of a twin-screw compressor. The effect of the different geometrical parameters of the rotors such as male and female tip radii on the specific power of the compressor is investigated.

What is a screw air compressor oil return pipe?

The oil return pipe of the screw air compressor is an important part of the oil circulation system. Its main functions include: 1. Stable oil return: The oil return pipe smoothly draws the lubricating oil at the bottom of the oil-gas separator back into the compressor casing to maintain the stability of the oil circuit circulation.

Does a twin-screw compressor with oil injection have a transient CFD analysis?

Wang et al. (2021) performed the transient CFD analysis of a twin-screw compressor with oil injection in the compression chamber. CFD simulation results found good agreement with the experimental results for air mass flow rate and indicated power.
