Several different kinds of top drives exist, and are usually classified based on the "Safe Working Load" (SWL) of the equipment and the size and type of motor used to rotate the drillpipe. For offshore and heavy duty use, a 1000 short ton unit would be used, whereas a smaller land rig may only require a 500 short ton device. Various sizes of hydraulic motors, or AC or DC electric motors, are available.

A top drive system is a sophisticated piece of drilling equipment mounted on the derrick of a drilling rig. Unlike traditional rotary table systems that use a Kelly drive, top drive ...
