

Videos of offshore drilling rig fires

What was the first offshore drilling rig?

The first offshore drilling rigs in the US were the Ferry Lake No. 1 rigs, which were drilled by The Gulf Refining Company on Caddo Lake in Louisiana around 1938. These rigs produced 450 barrels per day, marking the beginning of offshore drilling operations in the US without a pier connection to the shoreline.

How did a fire affect the oil & gas industry?

The field has not been producing since February 2024, and decommissioning activities are currently being undertaken. As disclosed, the fire was put under control in 30 minutes and did not affect the environment, neither did it have an impact on normal exploration and production activities at other oil and gas projects.

Did a fire break out at PetroVietnam Exploration Production Corporation (pvep)?

A fire has broken out at a platform offshore Vietnam operated by Petrovietnam Exploration Production Corporation (PVEP). According to PVEP, the incident occurred at the Song Doc field, off the coast of Southwest Vietnam, in the late afternoon of May 21, 2025.

These drills are crucial for maintaining a high level of readiness to respond to various emergency situations that might arise in the challenging and often hazardous offshore environment.
