

Where can I find a job operating a down-the-hole drill

What is a down hole drill used for?

A down hole drill, or DHD, is used to drill overburden and rock. Casing bits and reamers are used to drill the initial holes to install casing and to provide an annulus for grouting. The following instructions are for a stabilizer to be used with the down hole drill.

What happens after a well is drilled?

Once drilling is finished, the well must be prepared for production. This stage involves completing the well to ensure it can efficiently extract hydrocarbons. Key Steps: Casing and Cementing: Steel casing is inserted into the drilled hole and cemented in place to secure the wellbore.

What is a good entry-level job in oil & gas?

Entry-Level Opportunity: Lease Operator- Inspects wells, records production data, and performs basic maintenance tasks. This is a common entry point for workers new to oilfield operations. Construction Laborer: Assists with facility installation, pipeline construction, and other infrastructure projects.

What does a wellhead technician do?

Wellhead Technician: Installs and maintains wellhead equipment, ensuring all seals, valves, and pressure gauges function correctly. Technicians are also involved in troubleshooting and replacing worn components. Perforating involves creating holes in the casing to allow hydrocarbons to flow into the wellbore.

Environmental Remediation. 90% of jobs end up being "Dig hole, put the bad stuff someplace else and don't poison yourself doing it, then put new dirt in hole". Sometimes big holes, with ...
