Explore the essential components of workover rigs, the services they provide, and the latest market trends shaping the future of well servicing in the oil and gas industry.

Overview Operation Reason to perform a workover Workovers on casing Before any workover, the well must first be killed. Since workovers are long planned in advance, there would be much time to plan the well kill and so the reverse circulation would be common. The intense nature of this operation often requires no less than the capabilities of a drilling rig. The workover begins by killing the well then removing the wellhead and possibly the flow line, then installing a B.O.P. commonly known as a blowout preventer, then lifting the tubing hanger fr...
